

# Conflict of Interest Disclosure Statement

Hemanth Manchabale Papachappa

Aniriuddha Ganguly

September 2026

**Manuscript title:** Geodesic Diagnostic Trajectories (GDT): A Differential Geometry Framework for Adaptive Decision Support and Operational Optimization in EHR Systems

**Journal:** IEEE Journal of Translational Engineering in Health and Medicine (JTEHM)

In accordance with IEEE policy on conflicts of interest, the authors of this manuscript make the following declarations:

1. **Financial interests.** Neither author has any financial interest, direct or indirect, in any company, product, or service related to the subject of this manuscript, including but not limited to electronic health record systems, clinical decision support software, information retrieval platforms, or healthcare IT vendors.
2. **Funding.** This research received no specific grant from any funding agency in the public, commercial, or not-for-profit sectors. No external funding was received for the design, execution, analysis, or reporting of this study.
3. **Employment and affiliations.** The authors are not employed by, and hold no paid consulting or advisory relationships with, any organization whose financial interests could reasonably be perceived as influencing the reported research.
4. **Data sources.** All datasets used in this study (MIMIC-III, MIMIC-IV, eICU, HiRID) are publicly available under their respective data use agreements. No proprietary clinical data was accessed. The authors have no financial relationship with the custodians of these datasets.
5. **Prior publications.** This work builds on the Continuum Memory Architecture (CMA) described in earlier preprints by the first author (CMA preprints, 2026). GDT is an extension of that framework; the present manuscript reports new theoretical contributions (Proposition 1), a new four-arm benchmark, and a new confidence-scaling mechanism not present in the prior works. The overlap is fully disclosed in Sections I and II of the manuscript and in the Previously Published Statement filed separately.
6. **Personal relationships.** Neither author has a personal relationship with any editor or reviewer of this journal that could be perceived as influencing the peer review process.
7. **Non-financial interests.** The authors have no non-financial competing interests (ideological, personal, academic, or otherwise) that could have influenced this work.

**Author signatures:**
