

Highlights

Continuum Memory Architecture (CMA) for Clinical Search

- CMA's geodesic-shift gating and JEPA prefetching cut latency by 21–23%.
- CMA reduces time-to-information by 13–17% with 100% task completion.
- Geodesic-shift gating suppresses stale context after topic pivots.
- SPD-manifold intent encoding tracks topic pivots via geodesic shifts.
- Benefits persist from 1 to 10,000 vignettes (3 to 30,000 sessions).
